Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

glucose-6-phosphate isomerase (EC 5.3.1.9) - Escherichia coli (strain K-12)
N.Alternate names: phosphoglucose isomerase;
N.Alternate names: phosphoglucose isomerase
C.Species: Escherichia coli
C.Date: 31-Mar-1990 #sequence revision 17-Oct-1997 #text_change 01-Mar-2002
C.Accession: H65209; US0142; S04396
R.FBlattner. F.R.; Plunkett III, G.; Bloch, C.A.; Perna, N.T.; Burland, V.; Riley, M.; Cc
Science 277, 145-1462, 1997
A.FILLE: The Complete genome sequence of Escherichia coli K-12.
A.Reference number: A64720; MUID:97426617; PMID:9278503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A)Cross-references: (B:X15196; NID:942376; PIDN:CAA33268.1; PID:942377

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 7327, Application US/09543681A
Patent No. 6605709
GENERAL INFORMATION:
APPLICANT: GARY BRETON
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT FILING DATE: 2000-04-05
PRIOR REPEIGATION NUMBER: US 60/128,706
PRIOR FILING DATE: 1999-04-09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

Sequence 27022, Application US/09252991A

Sequence 27022, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 565
                                                                                                                                                                       GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BADMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6225, Application US/09328352

WPI; 2003-606630/57.

Saliva immunoassay for detection of antibodies for autoimmune disease, e.g. lupus, in patient, by determining level of antibodies against autoantigen, and comparing level of determined antibodies with normal levels of antibodies

Example 8; Page 7; 16pp; English.

autoimmune disease in a patient. Specifically, the method determines the level of antibodies that are present against the autoantigens for a particular autoimmune disease and compares these results with normal levels to determine the likelihood or severity of such a disease. The test comprises a highly sensitive and accurate ELISA (enzyme-linked immunosorbant assay) that measures saliva IgA specific antibody titres squintt the purified antigens or a corresponding recombinant antigen or synthetic peptide of an autoantigen, where the autoantigens are lupus peptides, arthritis peptides, platelet glycoprotein or immune complexes. As such, this single test can be used to accurately detect antibodies for This invention relates to a novel saliva immunoassay for diagnosing an

Neuroleukin is a single polypeptide chain of apparent mol. wt. 56000 +/-
5000 D (by SDS-PAGE), with the ability to maintain 1/2 maximal survival
of spinal or sensory neurons cultured in vitro at a neuroleukin concn. of
0.0000000125 M, and the ability to activate immunoglobulin secretion by
peripheral blood lymphocytes. Neuroleukin is useful in tissue culture
medium for culturning neural cells and extends the survival of sensory
ganglia, brain cells and spinal neurons in culture. A portion of the DNA
sequence has significant homology to portion of the HTLV III/LAV envelope
protein gene, thus may be useful to treat AIDS, or in an AIDS vaccine.
Its treatment of HIV infection is claimed. The protein is encoded by 2
exons. (Updated on 25-MAR-2003 to correct PA field.)
diseases such as lupus or arthritis. Furthermore, it is useful to indicate ongoing pathology or to predict an early pathogenic reaction for autoimmune disease. This peptide sequence is the arthritis peptide used in a test for arthritis antibodies, in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New neuro:leukin protein - useful for culturing neural cells, and for treating human immuno-deficiency virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to diagnosing arthritis. The method involves detecting the presence of autoantibodies against glucose-6-phosphate isomerase (GPI) or GPI-like proteins, in the plasma or serum sample of the patient. Antibodies may also be developed for the diagnosis, treatment and prevention of arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Sequences AAV03632-36 represent products of hypoxia-regulated genes of the invention. The genes and their products can be used therapeutically and diagnostically in hypoxia, ischemia, apoptosis and angiogenesis. The products and methods can be used for e.g. inducing apoptosis in tumorigenic cells or angiogenesis in trauma situations where e.g. a limb must be reattached or in a transplant where revascularisation is needed
                                                                                                                                         New isolated hypoxia-related genes - used to develop products for use in therapy and diagnosis in e.g. hypoxia, ischaemia, apoptosis and

                                                                                                                                                                                                                                                                                                                                                                                                                          Neuroleukin is a single polypeptide chain of apparent mol. wt. 56000 +/-
2000 D (by SDS-PAGE), and with ability to maintain 1/2 maximal survival
of spinal or sensory neurons cultured in vitro at a neuroleukin concn. of
0.0000000125 M, and the ability to activate immunoglobulin secretion of
peripheral blood lymphocytes. Neuroleukin is useful in tissue culture
medium for culturing neural cells and extends the survival of sensory
ganglia, brain cells and spinal neurons in culture. A portion of the DNA
sequence has significant homology to portion of the HTLV III/LAV envelope
protein gene, thus may be useful to treat AIDS, or in an AIDS vaccine.
Its treatment of HIV infection is claimed. The procein is expressed from
2 exons. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hypoxia-regulated gene; therapeutic; diagnostic; hypoxia; ischemia; apoptosis; angiogenesis; tumorigenic cell; trauma; limb reattachment; revascularisation.

```
The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ABV77873-ABV78116 specialised cell types under experimental conditions. ABV77873-ABV78116 conditions, ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating disease in a patient, for manufacture of a medicament for treating hypoxia-regulated conditions, and for regulating tumourigenesis, angiogenesis, apoptosis, biological response to hypoxia conditions, or hypoxic-associated patient. The coding sequences and proteins are also useful committering the therapeutic treatment of a disease or physiclogical condition, such as cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, preedlapmisia, atherosclerosis, inflammatory conditions, wound healing, inflammation, erythropoiesis or hair loss

e.g. New angiogenic genes and polypeptides, useful for diagnosing, prognosticating or treating an angiogenesis-related disorder, cancer, rheumatoid arthritis, diabetic retinopathy, psoriasis

```
The invention relates to the isolation of novel genes (ACF3446-ACF34559)
encoding proteins (ABR64180-ABR64281) involved in the process of
encoding proteins (ABR64180-ABR64281) involved in the process of
complements. The mucleic acid molecules are useful in identifying and/or
obtaining full-length human genes involved in an angiogenic process. The
nucleic acid molecule, polypeptides or complexes encoded, cells or
complements and officed non-human animals derived from these are useful for
the screening of candidate pharmaceutical compounds used in treating
angiogenesis-related disorders. They are also useful for diagnosing,
complements related disorders. They are also useful for diagnosing,
prognosticating or treating an angiogenesis or is a disorder; which
involves uncontrolled or enhanced angiogenesis or is a disorder in which
a decreased vasculature is of benefit (e.g. cancer, rheumatoid arthritis,
diabetic retinopathy, psoriasis or cardiovascular diseases such as
catheroscierosis, or involves inappropriately arrested or decreased
angiogenesis or is a disorder in which an expanding vasculature is of
benefit (e.g. ischemic limb disease or coronary arrest disease). The
complement of expression or activity of the polypeptide encoded by the
cucleic acid sequence is useful for manufacturing a medicament for the
creatment of an anglogenesis-related disorder. This sequence corresponds

                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                    The present invention describes a method for assessing whether a patient is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see ACCS0076 to ACCS0334 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a patient sample and the normal level of expression of the marker in the patient sample and the normal level of expression of the marker in the patient sample and the normal level is an indication that the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cytostatic activities and can be used in gene therapy. The method is useful for diagnosing and treating breast cancer. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated hypoxia regulated nucleic acid molecule comprising a rat or human sequence (designated RTP801 and molecule comprising a polypeptide appearing as ABU63753 and ABU63754. Also included are an antibody that specifically binds to the polypeptide encoded by the nucleic acid molecule and treating hypoxia or ischaemiarelated disease in a subject by administering to the subject an antagonist of a protein comprising of the human protein or its analogue.

Specifically, it refers to neuroleukin, a hypoxia regulated gene that is also an astrocyte motility factor important in the formation of blood vessels in the brain and retina, accordingly antisense inhibitors can be useful for the diagnosis and treatment of angiogenesis. The present invention describes gene therapy be used for the treatment of hypoxia and ischaemia, and furthermore can regulate apoptosis, and therefore also be used to treat cancer. Accordingly, they have various activities such as angiogenic and apoptotic, as well as being vascullators. This polypetide sequence is the human phosphohexose isomerase enzyme, a neuroleukin protein homologue encoded by the RTP971 cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0

The invention is useful for diagnosing, treating hypoxia and ischaemia, for regulating angiogenesis or apoptosis and for regulating response to hypoxic conditions in a patient. The invention is also useful in gene therapy. The present sequence is human hypoxia-regulating protein from
                                                                                                                                                                                                                                                                                                                                    New hypoxia-regulating genes and proteins, useful for diagnosing and treating hypoxia and ischemia, for regulating angiogenesis or apoptosis, or for regulating response to hypoxic conditions in a patient.

The invention fractures to an isolated nucleic actic computers, to an internation between the internation of a cell. Also included are:

(c) the nucleic acid inhibits proliferation of a cell. Also included are:

(c) a vector comprising a promoter operably linked to the nucleic acid

encoding a polypeptide whose expression is inhibited by the antisense

concleic acid; (2) a host cell containing the vector; (3) an isolated

concleic acid; (4) an antibody capable of specifically binding

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide, (5) producing the polypeptide; (6) inhibiting cellular

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide, (5) producing the polypeptide; (6) inhibiting cellular

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide, (5) producing the polypeptide; (6) inhibiting cellular

contisense nucleic acid; (4) an antibody capable of specifically binding

contisense nucleic aciding the acidinity of

the gene product or that has an activity against a biological pathway

contisensed for proliferation, or that inhibits cellular proliferation of the acidined for cellular proliferation or the biological

congound's activity, (11) a culture comprising strains in which the gene

congound's activity, (11) a culture comprising strains in which the gene

congound's activity, (11) a culture comprising strains in which the congenie of the strains is present in a culture or collection of

congound's activity, (11) a culture comprising strains in which the gene

congound's activity, (11) a culture comprising strains; or (13) identifying the target of a compound that inhibits the

confidentifying proteins or screening for homologous nucleic acids required

collideration of an organism. The antisense moleic acids are useful for

collular proliferation to isolate candidate molecules for rational

collideration and organism and organism uncleic acids required

collideration and organism collide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by the target prokaryotic essential genes. Note: The sequence data for this patent din not form part of the printed specification, but was obtained in electronic format directly from Nucleo at firm in electronic format directly from Nucleo at firm in the proposition in the proposition of the propositi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid comprising any one of

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are correcting the prome of P. luminescens courses of probes and primers for detecting the geneme of P. luminescens and related species, to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the CD lypophyldes encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that complained or microcoganisms other than P. luminescens and are able to alter recombinant production of the proteins, particularly toxins and carried antibacterials useful as insecticides, bactericides and fungicides. The antibacterials useful as insecticides, bactericides and fungicides. The complaining the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens encoded toxins or antibiotics) and as the sensitive to P. luminescens and the proteins are as virulence factors and for identifying targets of human diseases for which P. complaining the sequence represents one of the isolated P. luminescens proteins

The present invention relates to a method of identifying a compound that modulates aging, involving contacting a compound with one of cytochrome (I, NADH oxidoreductase, ATP synthase, cytochrome C oxidase, phosphoglucose isomerase, GTPsee, LLW-1, LLW-2, LLW-3, LLW-4 and HSP-1, and determining the functional effect upon the polypeptide. The method is useful identifying compounds that modulate aging and in regularing adult lifespan in eukaryotes, e.g. humans, animals and plants. The compound may also be used in diagnosis and therapy related to lifespan extension, life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying a compound that modulates aging, comprises contacting the compound with a polypeptide comprising, e.g. NADH oxidoreductase or phosphoglucose isomerase, and determining the effect of the compound on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                            Adult lifespan, glycolysis, mitochondrial respiratory chain, aging, gene therapy, cytochrome C1, NADH oxidoreductase, ATP synthase, cytochrome C oxidase, phosphoglucose isomerase, GTPase, LLW-1; LLW-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expectancy, and aging. The present sequence is the C. elegans phosphoglucose isomerase, which is one of the proteins involved in lifespan regulation and described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 551;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein encoded by Prokaryotic essential gene #24596.
                                                                                                                                                                                                                                                                                                                                                                                                                                   À.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Heu

The invention relates to an isolated nucleic acid comprising any one of the fall antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid; (2) a host cell containing the vector; (3) an isolated or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding of the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation of the gene product or that has an activity against a biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of the which each of the strains is present in a culture or collection of the proliferation of an organism. The antisense nucleic acids are useful for the confidence of a compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for any alsonomer proversers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 25; SEQ ID NO 66993; 1766pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
